Professional Summary

Computer Science graduate with experience in UX research, software design, and structured technical workflows. Skilled in organizing information, evaluating user behavior, and supporting teams through clear documentation and reliable execution. Brings a strong foundation in programming, software testing, and user-focused analysis, with the ability to contribute effectively to collaborative technical projects.

Core Competencies

- UX research and prototyping
- Software testing
- Java, Python, and C++
- HTML and CSS
- Data reporting and archiving
- User interface design
- Organizational skills
- Reliability
- Attention to detail
- Clear communication

Technical Experience

- Designed and prototyped user-focused tools, including an architectural workflow toolkit and a mobile transcription redesign, applying structured content organization and interactive layout design.
- Conducted user interviews, organized insights, and tested prototypes to understand usability issues and improve workflows.
- Built small applications using event-driven programming and modular logic.
- Created a secure home network model using subnetting and access control lists, with basic threat analysis
